ABOUT ME

A passionate Software Engineer (.NET) with a strong foundation in programming and robotics. Currently working at Orbitax, where I build and enhance .NET-based applications. Alongside my professional work, I actively explore robotics, IoT, and automation projects – having successfully completed multiple DIY systems, including three humanoid robotics prototypes. With a deep enthusiasm for problem-solving, creative engineering, and continuous learning, I aim to bridge the gap between software development and intelligent robotics, contributing to innovations that make a tangible impact.

EXPERIENCE

Software Engineer (.NET)

Orbitax — May 2024 – Present

- Developing and maintaining .NET-based enterprise solutions.
- Collaborating with cross-functional teams to enhance software performance and scalability.

Founder & Chief Mentor

RoboICT — 2024 – Present

- Founded an educational startup focused on teaching robotics and programming to school and college students.
- Designed hands-on courses combining Arduino, IoT, and basic AI concepts.

Programming & Robotics Trainer

Comilla District Commissioner's Office — 2022 – 2023

- Delivered robotics and programming workshops across 10 upazilas and 30 schools/colleges in Cumilla.

Co-Founder & Robotics Programmer

Quanta Robotics — 2021 – 2023

- Led development of three humanoid robotics projects: Robot Niko, Robot Sheena, and Robot Blueberry.
- Worked on several IoT and embedded-systems projects focused on automation and smart devices.

Activities & Involvements

- Contributed to multiple organizations including Comilla University Science Club, IT Society, Cumilla Robotics and Programming Club, and Comilla University RoboICT Society.
- Served as advisor for school robotics clubs and coordinator for science fairs and contests.

SKILL

- **Robotics**
 - ROS2, URDF, Gazebo Simulation, Arduino, NodeMCU, Raspberry Pi
- **Programming Language**
 - C++, Python, Arduino Programming
- **Programming**
 - Data Structures, Algorithm, OOP
- **Version Control**
 - Git, GitHub
- **Electronics**
 - PCB Design, BMS

EDUCATION

B.Sc. Engineering

Department of

Information and Communication Technology
Comilla University, Bangladesh

CGPA: 3.37 out of 4

CERTIFICATES

Mujib 100 Idea Contest

ICT Ministry

Crash Course on Python

Coursera

Runner UP at Line Follower Robot

Bangladesh Army International University of Science and Technology (BAIUST)

ONLINE PROFILE

Codeforces ID : CodeCell

Solved 1200+ Problem, CF Specialist (Max: 1509)

Hackrank ID : devjewel

Solved 200+ Problem

LightOJ ID : devjewel01

Solved 60+ Problem

PROJECT

Humanoid Robot

- Robot Niko 
- Robot Blueberry 
- Robot Sheena 

Completed 3 humanoid robots, focusing on Linux, Raspberry Pi, Robot Operating System (ROS), MoveIt, Joint Planning, Mapping, Path Planning, and other related technologies.

Stack: Linux, ROS2, Python, Arduino, Raspberry Pi

Autonomous Pi Car

Autonomous car using Python and Raspberry Pi 3 which focuses on implementing fundamental of self-driving car algorithms.

Stack: Python, Arduino, Raspberry Pi

EnviroBot

A mobile robotic arm designed for efficient cleaning and task automation. An autonomous garbage collection and sorting system capable of segregating waste into categories such as paper, plastic, metal, and general trash.

Stack: Python, Arduino, Raspberry Pi
